**T**his spectacular private residence designed by MacCormick and Associates Architects is a unique family sanctuary of sophistication and style in the Lower North Shore suburb of Mosman.

Expansive water views from each level, dynamic architecture, extensive and beautifully detailed sandstone works and exquisitely crafted interiors combine to provide an exceptional retreat for living and entertaining on all scales.

Gosford Quarries supplied over 200 square metres of randomly squared split faced cladding. Elements of curved walling, stair treads and coping stones were precisely cut to prepared templates to create a true curve. The split faced wall cladding has been installed to last a lifetime using stainless steel pins to mechanically fix each panel to the substrate.

This new residence is undoubtedly one of

Sydney's most awe-inspiring family homes, finished in the finest quality materials and setting new benchmarks of excellence in architecture, construction and attention to detail.

The sandstone is quarried at Mount White on the Central Coast of New South Wales. This popular sandstone has been used extensively in residential and commercial projects throughout the state. The stone is principally used on floors, in landscaping projects and as cladding material.

It is available in three distinct colour tones; brown, pink and the featured white in a variety of thicknesses and sizes.
