

## Stone made streetscape

CATEGORY  
**AUSTRALIAN STONE**  
 - BEST CIVIC PROJECT -

**ARCHITECT:** Urban & Landscape design by Outlines  
**DESIGNER:** Urban & Landscape design by Outlines – team project  
**BUILDER/DEVELOPER:** Project delivery by 2Construct and build by KL Design and Construction  
**STONE SUPPLIER:** Bamstone  
**STONE INSTALLER:** KL Design and Construction (Kings Landscaping – Geelong)

Installed by Kings Landscaping Design and Construction along with 2Construct, over 5000sqm of 40mm, 60mm, 80mm and 100mm thick Diamond Sawn Australian Bluestone paving was supplied to Stage 1 of the Liebig Street redevelopment, as part of the Warrnambool City Centre renewal project.

There was approximately 2km of straight and radial 200 x 300mm kerb, along with various straight and radial flush tray and wings for several crossings. Unique to this design was the creation of “Activity Node Paving Junction” stones which were specific to Outlines’ design and were used to create the custom planter boxes which now line the main street of Warrnambool. Bespoke overflow kerbs were also created for this

project along with four freestanding bluestone seats (400 x 300mm).

Custom engraved paving featuring the name of the streets was also installed at the pedestrian crossings along each corner of the main areas.

As a gift from Bamstone to the Warrnambool City Council, director Michael Steel created and donated the uniquely carved “Liebig” Street sign, which was installed at the beginning of the new streetscape. This custom seat took three days to carve out on the CNC Wire Saw and a few additional weeks to be finished by hand by Bamstone’s expert stonemasons.

It took Bamstone around 12 months to produce all the stone required for this project and six months for Kings Landscaping and 2Construct to complete construction.
